INTRODUCTION

Information Technology graduate pursuing a career in Fullstack Development. Hands-on experience building REST APIs and web applications through academic and personal projects. Experienced in using AI coding agents such as Claude Code to assist development while reviewing and validating generated code. Comfortable reading and learning from English technical documentation. Seeking a Fullstack Developer Internship to further develop my backend, frontend, testing, and software development skills in a professional environment.

EDUCATION

- **Ho Chi Minh City University of Transport, UTH**
- **B.S.** in Information Technology | GPA: 2.91/4.00

Dec 2023 – Present
Ho Chi Minh City, Vietnam

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, PHP, SQL
- **Frontend:** React, Vite, Tailwind CSS
- **Backend:** Node.js, Express.js, Laravel
- **Databases & ORM:** MySQL, PostgreSQL, Drizzle ORM
- **Tools:** Docker, Git, GitHub Actions, Postman, Jira

PROJECT

AI-Powered HR Management System (TypeScript, React, Node.js, Express.js, LLM API) -- [GitHub](#)

August 2026 – Sep 2026

Backend & Architecture

- Built a REST API (Node.js, Express, PostgreSQL) for employees, departments, attendance, and leave.
- Implemented JWT authentication with rotating refresh tokens, revoking all sessions when a reused token is detected.
- Designed role-based access control for Admin, HR, and Employee, preventing unauthorized access to salary data.

AI, Frontend & Devops

- Designed an LLM-powered HR assistant with tool-calling for employee data queries, with permission checks, audit logging, and rate limiting enforced server-side.
- Developed the frontend with React, TypeScript, and Tailwind CSS, including dashboards and an account administration page.
- Configured GitHub Actions CI to run linting, type checks, and automated tests.

FashionShop — E-Commerce Website (PHP, Laravel, React, MySQL, Docker) -- [GitHub](#)

July 2026 – August 2026

Backend & Architecture

- Built REST APIs with Laravel for products, categories, carts, orders, reviews, addresses, and customer profiles.
- Implemented Laravel Sanctum authentication and role-based middleware for customer and admin access.
- Designed order status transitions and business rules for cancelled orders and revenue calculation.

Frontend & DevOps

- Built separate React storefront and admin dashboard using Vite, TanStack Query, Zustand, and Tailwind CSS.
- Added automated PHPUnit and Cypress tests and containerized the application with Docker.
- Configured GitHub Actions CI with SonarCloud for automated code quality analysis.

PCBuild Analyzer — PC Build Compatibility & Analysis (PHP, Laravel, React, MySQL, Docker) -- [GitHub](#)

Sep 2026 – Present

Backend & Architecture

- Built the API with Laravel and MySQL, covering components, template builds, compatibility, power and scoring.
- Kept all compatibility rules in plain PHP classes instead of SQL, so saved and custom builds run through the same engine.
- Wrote the analysis engine as a framework-free layer, which made it testable with plain PHPUnit.
- Secured the admin area with Laravel Sanctum and role-based middleware.

Frontend & DevOps

- Built the frontend with React, Vite and Tailwind, and shared builds through the URL so the app needs no user accounts.
- Tested the backend with PHPUnit and the frontend with Vitest, run automatically on GitHub Actions.
- Ran the whole stack in Docker and deployed it to Render with TiDB Cloud and Cloudinary.
